

**MedHermes**  
VEGETABLE SEEDS

**CATALOG  
2023**

Dear Customer

We would like to introduce you the 2023 Catalogue in English language for foreigner's market.

Med hermes vegetable seeds keep developing new products in the professional vegetable seed area at the highest quality levels and with high genetic resistance.

The various international markets's direct presence allows to have a constant and real flow of information on the needs of the markets and of our customers, which our r&d department timely analyzes and proposes on various solutions.

The focus on premium products, specifically on table tomatoes and cucurbitacea, places our company as the ideal partner for production groups and for markets that demand premium quality production, therefore it need a varietal offer with high flavor and aroma.

The supply chain projects on the [www.Tomatocult.Com](http://www.Tomatocult.Com) its tomato and [www.Bestmelon.Net](http://www.Bestmelon.Net) on the melon and watermelon are a real example as well as the international successes that we record in some target markets at the international level.

The investments in research - development of new markets - varietal offer continue as a company.

The entire variety range is not present in this catalog due to space problems, for different requests you can contact our foreign office at our headquarters in Ragusa - Italy.

Sincerely

**Amoroso Alfredo**

*...the tomato becomes social*

The **tomatocult.com project** is introduced from Med Hermes vegetable seeds in 2014, supported by our genetic research on fresh market tomatoes, it marks the ancient Mediterranean flavors and colors rediscovery of the home gardens. This controlled supply chain project, from seed to fruit, has the last goal of offering the European consumer a guaranteed product in the "**premium range**".

The platform/blog [www.tomatocult.com](http://www.tomatocult.com) supports and strengthens the Made in Med supply chain project through a virtuous communication process between producers and final consumers, in line with the new communication trends of the European consumption in a social-network key.

Thanks to [tomatocult.com](http://tomatocult.com), the consumer will be able to get information from the production world through photo shoots, videos and interviews on the specific production topics, with the aim of making known the entire production process that is finalized in the offer of a "premium" product offered to the consumer.

The blog moreover includes:

- **curiosities relating to the world of tomatoes;**
- **Scientific field information;**
- **creative ideas on how to use tomato in the kitchen.**

A branch is then dedicated to great chefs and their innovative recipes which have tomatoes as their main ingredient.

It could also be a place for exchanging opinions and/or a forum for the dedicated virtual community.

[www.tomatocult.com](http://www.tomatocult.com)

**Best Melon** born from the international experience of the Med Hermes Vegetable Seeds team on the production chain projects in "premium" fruit species.

Thanks to a devoted genetic research, our company can offer to the market of early plastic crops, a new variety of Italian netted melon DAFNE with high quality standards in terms of brix-aroma degree and perfumes, suitable for developing a controlled supply chain project along with "premium" productions.

Our way of how to see Made Italy let us think of a supply chain project that starts from the seed and reach on the consumers' table, all 100% Italian.

BestMelon is a guarantee of 4 fundamental characteristics of the premium product:

- **GOOD**
- **HEALTHY**
- **MONITORED**
- **ITALIAN**

The reference variety of this first phase of the project is Dafne F1 Melon, suitable for early harvests and characterized by high post-harvest shelf life which allows us to have a broad cultivation calendar so consumer can find it on the market from April to July.

The blog devoted to the BestMelon [www.bestmelon.net](http://www.bestmelon.net) acts as a virtual container in which users can find additional information, made available by the farms participating in the project, on the product consumed. It will also be possible to share emotions and sensations the product use, implementing a transparent communication process between production and consumption. The goal is still the flavors and colors' enhancement and rediscovery of the Mediterranean tradition within a 100% ITALIAN supply chain project.

A careful research and a constant experimentation made by Med Hermes Vegetable Seeds, have achieved the rediscovery of the ancient mediterranean flavors, making possible the creation of a Premium tomatoes range characterized by high organoleptic contents and nutritional elements (polyphenols, lycopene, sugars and so on)
