160 g

Calibre G

Indeterminate tomato variety for red cluster harvesting. Shiny red, the fruit weights around 160 gr. and it has quite flat shape. It possesses long shelf life. Elegant clusters with herringbone shape even in the upper parts. Their stems preserve a deep green colour in shelf life. Plant with medium stamina, breezy and covering, it has short internodes which are regular even in the upper parts. Very rustic, it adapts itself well to autumn transplants and long cycles, and it is very resistant to low temperatures of winter in cold greenhouse. It is recommended avoiding the use of chemical growth retardants due to the fact the plant does not need any, and also because that can cause agronomic damages.
