

Maximus F1

Middle-earling maturing

HR: ToMV; Fol 1
IR: TYLCV; Ma, Mi, Mj

15-18 g

Cherry tomato variety (mini cherry type) with indeterminate plant ideal for single fruit harvesting and/or cluster harvesting (which is realized through cutting the main cluster into many). The fruit is characterized by a weight of around 15 gr. (0,03 pounds) and an excellent shelf life (LSL). It has a high resistance against cracking. Fine taste and bright red coloured, brix between 8 and 11 depending on the season. Maximus F1's plant is very rustic and it has a medium stamina. It has short internodes, it is highly productive and it maintains a luxuriant blossoming even in the upper part. Lastly, it perfectly adapts to long cycles and transplants in autumn and winter, even with the grafting technique.
