## Technical information

For fresh market for greenhouse or open field cultivation indeterminate tomato variety. The plant is very rustic and short internode, with large and covering leaves, suitable for cultivation in hot periods. The root system is strong and wide which allows it to be used even in tired soils even if it is not very rich in organic substances. The fruit is round, smooth with uniform color (UG) and trilobed as well. When fully ripe it is intense red, very hard and with a very high shelf life (LSL). The bunch has 5-6 herringbone fruits, with a large and persistent rachis and excellent homogeneity of the fruits both in shape and size. The variety is suitable for harvesting in red bunch or single fruit both red and in color.
