Red Lamuyo pepper

Technical information

Red Lamuyo pepper is suitable for tunnel/greenhouse cultivation with Spring-Summer transplants. The variety is an early and exceptionally suitable for long cycle, due to its continuous flowering and uniform fruits even in high stages. The fruit is regular with 4 lobes, intense red color and thick pulp that gives it consistent specific weight and excellent post-harvest shelf life (LSL). The plant is medium-vigorous, rustic and equipped with a good set of genetic resistances. The leaves are large to cover and to protect the fruits from possible sunburn due to excessive sunlight in the hot months.
