

Telamon* F1 (ex MSP 119)

Medium
late

HR: TSWV; Tm 0-3

10x10 cm

California Red Pepper suitable for tunnel/greenhouse cultivation with long cycle Summer transplants. The variety is premature, with continuous flowering and uniform fruit even in the high stages. The fruit has a regular shape with 4 lobes, deep red color and thick pulp which gives it considerable specific weight and an excellent shelf life both on the plant and post-harvest (LSL). The plant is very strong and rustic, with an excellent root system that supports the plant well throughout the production cycle. The leaves are large and opaque and protect the fruits from possible burns due to excessive sunlight during the hot months.
